Chatbot-Based Project Evaluation Questionnaire (INT428)

Student Name: Ishan Walia
Roll Number: 42
Branch & Semester: BTech Computer Science and Engineering. (4 semester)
Project Title: AI-Based Environmental Awareness and Campaign Generator
Guide/Faculty Name: Sheveta Maam.

Section A: Project Overview

Q1. Type of Chatbot Developed

(Select one)

☐ Rule-based

☐ Retrieval-based

✓ Generative (LLM-based)

☐ Hybrid

Question Note:
This describes the core logic of your chatbot, whether it follows predefined rules, retrieves answers, generates responses using an AI model, or combines multiple approaches.

Q2. Platform Used for Deployment

(Select all that apply)

☐ Web Application

✓ Mobile Application

☐ Desktop Application

☐ Messaging Platform (WhatsApp/Telegram/Slack)

☐ Cloud API only (no UI)

Question Note:
Mention where the chatbot is hosted and accessible by users.

Q3. Deployment Link / Access Details

Deployment URL / App Link: EcoAware-Ai-App

Question Note:
The application can be downloaded and installed using the APK file.

Section B: Model & API Details

Q4. Type of API Used

(Select one)

- ✓ OpenAI API
- ☐ Google Gemini API
- ☐ Azure OpenAI API
- ☐ Custom REST API
- ☐ Local Model API

Question Note:
This refers to the service/API used to communicate with the chatbot model.

Q5. Model Name Used

Model Name: openai/gpt-3.5-turbo

Question Note:
Specify the exact model used (e.g., GPT-4, GPT-3.5, LLaMA, Gemini Pro, etc.).

Q6. Model Version

Model Version / Release: Latest API version

Question Note:
Mention the version or release identifier of the model, if available.

Section C: Context & Data Handling

Q7. Contextual Memory Usage

(Select one)

- ☐ No memory (single-turn chatbot)
- ✓ Session-based memory
- ☐ Long-term memory (database/vector store)
- ☐ Hybrid memory approach

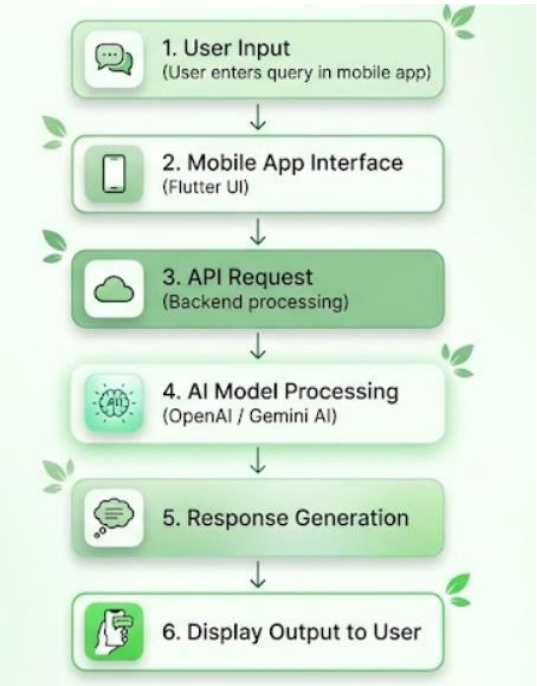
Question Note:
Contextual memory defines how the chatbot remembers past user interactions.

Q8. Flow of Data in the Chatbot

Briefly explain the data flow:

User input is entered through the mobile application interface (Flutter UI). The input is sent to the backend via API requests. The backend forwards the request to the Generative AI model (OpenAI/Gemini API). The model processes the input and returns a response, which is displayed to the user in the app.

Question Note:
User Input → Mobile App → Backend API → AI Model → Response → Display to User



Section D: Model Configuration & Behavior

Q9. Model Parameters Used

(Fill if applicable)

Parameter	Value	Not Applicable
Temperature	0.4	✓
Top-p / Probability	0.9	✓
Input Token Limit	Not Applicable	✓
Output Token Limit	Not Applicable	✓

Question Note:
These parameters control creativity, randomness, and response length of the chatbot, could be discovered from Run settings or Playground settings if using AI studio.

Q10. Thinking Level & Role Assignment

(Select appropriate options)

Thinking Level:

☐ Basic (direct answers)

✓ Intermediate (context-aware reasoning)

☐ Advanced (multi-step reasoning)

Role Assigned to Model:

☐ Assistant

☐ Tutor

☐ Customer Support Agent

✓ Domain Expert

Question Note:
Thinking level defines the reasoning depth, while role assignment defines how the chatbot behaves in responses.

Section E: Technology Stack

Q11. Technology Stack Used

(Mention tools & frameworks)

Frontend: Flutter (Dart-based Mobile Application UI).

Backend: REST API Integration with Generative AI (OpenAI/Gemini).

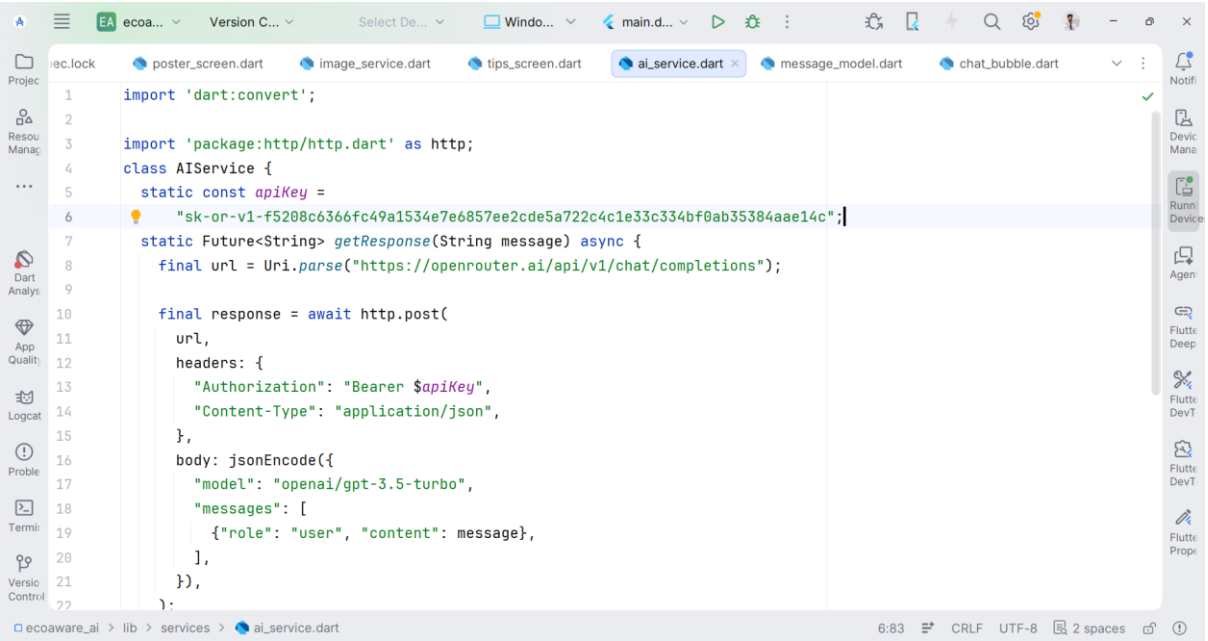
Database: Firebase Firestore (for storing user data and interactions).

Cloud / Hosting: Firebase Cloud Services (Authentication, Storage).

Question Note:
Specify the complete technical stack used to build and deploy the chatbot.

Section F: Implementation Evidence (Screenshots & Code)

Q12. API Call Screenshot



Question Note:
The code snippet should clearly show:

- Model/API response
- User input or prompt
- Successful request execution

Q13. Chatbot Working Interface Screenshot

Hello! How can I help you today?
what is environment awareness
Environmental awareness is the understanding and recognition of how various human activities impact the natural world and the importance of protecting and preserving the environment for future generations. It involves being informed about environmental issues such as climate change, pollution, deforestation, and loss of biodiversity, and taking action to promote sustainability and conservation efforts. It also

Question Note:
The screenshot should show:

- User input
- Chatbot response

- Platform used (web/app/messaging)

Q14. GitHub Repository Link

- Repository URL: https://github.com/ishan-walia/ecoaware-ai-app
- **Question Note:**
  Provide only if the project code is hosted publicly.

Declaration

I confirm that the information provided above is accurate to the best of my knowledge.
